

EdgeTrak™

Remote, Downstream Visibility at the True Network Edge—the CPE

EdgeTrak is a test client built into participating manufacturers' customer premises equipment (CPE). Uniquely combining Broadcom® Full-Band Capture technology and Viavi Solutions test expertise, EdgeTrak enables unprecedented remote qualification and troubleshooting without interfering with customer service. It dramatically improves HFC health visibility by acting as a virtual meter in each customer's home.

EdgeTrak provides MER measurements for *all* downstream digital carriers and patented ingress under QAM signal analysis for detecting LTE and other off-air signal interference. Viewing MER for all downstream digital carriers gives clear insight when services are impacted on *any* carrier, not just the tuned CPE carrier.

EdgeTrak is an economical and logical extension to your existing CPE polling and analysis infrastructure. It helps pre-qualify and certify self-installs, reduces OpEx by improving dispatch accuracy, and increases maintenance effectiveness by focusing on plant sections with the worst service-impacting impairments.

Stay tuned to www.viavisolutions.com/go/EdgeTrak for more information about this exciting new technology!

EdgeTrak replaces truck rolls with SNMP polls—saving time and money while increasing customer satisfaction

Key Benefits

- Gain *complete* downstream visibility; see quantifiable digital performance at the CPE
- Leverage a fleet of remotely-accessible test probes instead of rolling trucks
- Improve tech-dispatch accuracy with remote, home vs. plant segmentation
- Increase customer satisfaction by remotely troubleshooting issues instead of visiting the customers home
- Identify service-impacting impairments and fix them first

Applications

- Remote HFC plant and service health measurement
- Self-install qualification and support
- Remote LTE/off-air ingress detection and localization
- Proactive downstream health data trend analysis
- Maintenance prioritization based on service impact
