

MAP Optical Switch Solutions

mISW-C1

The mISW-C1 Optical Switch module is the industry standard for manufacturing test automation applications and has the widest array of switch options in the industry. A member of the LightDirect Family of MAP-200 modules the mISW-C1 is optimized for switch configurations with more than 24 channels.

The 2U MAP-202C chassis is required for channel counts from 24 to 72.
The 4U MAP-204C chassis is required for channel counts from 96 to 176.

Configuration Process

All mISW switches are configured by a single part number that defines the function and options of the switch.

The structure of the part number mISW-C1**ABBCCDE**-**MXXX**-**MY** is as follows:

- A** refers to the number of independent mOSW-C1 switches in the module (currently only 1)
- BB** refers to the switch type and defines the input type (1C, 2D¹, 2E)
- CCC** defines the number of outputs (from 024 to 176, increments shown in table)
- D** defines the termination type (B for bulkhead, Q for 3m pigtails, R for 10m pigtails).
- E** defines the options (0 = no option, 1 = Power Trim option²)
- MXXX** defines the fiber type, refer to Table 1
- MY** defines the connector type, refer to Table 2

Table 1

Code	Fibre Type
M100	9µm Single Mode
M101	50µm (OM3)
M102	62.5µm (OM1)
M105 ³	100µm

Table 2

Code	Connector Type
MFA	FC/PC
MFP	FC/APC
MSC	SC/PC
MSU	SC/APC
MLC	LC/PC
MLU	LC/APC

4U MAP-204CXR-A

Notes

1. D Config part numbers indicate the number of switchable output states. The total number of physical output connectors will be 2X the number of states i.e. 2DX024 has 48 output connectors
2. Power Trim option is available only for single mode 1C type switch with <=72 ports
3. 100µm fiber type is available only for FC bulkhead termination with <=72 ports
