

Introducing the SmartClass™ Home iPad® Application

The industry-leading JDSU SmartClass Home is now part of an ultimate solution that can increase technician productivity. The SmartClass Home iPad application enables quicker, more efficient testing with immediate access to technical support information. Now, the SmartClass Home can remain plugged into one location in the house while technicians move easily and quickly to remote locations simply using the SmartClass Home iPad app. The SmartClass Home iPad app also lets technicians see all the test results screens from the Smart ID's measurements on one screen, saving time and eliminating the need to switch test modes.

iPhone

The ultimate tool for increased technician productivity

- Revolutionary use for SmartClass Home to more quickly and efficiently test and collect data
- Compatible with iPad, iPhone®, and iPod Touch® devices
- Easy-to-use device interface for remote testing
- WiFi connection increases remote test range over Bluetooth
- Integrated training and support at your fingertips
- Works with all SmartClass Home variants

Introducing the SmartClass™ Home iPad® Application

COMMUNICATIONS
TEST & MEASUREMENT
SOLUTIONS

Simplify tasks, even as installation complexity increases

Designed with our customers for their installation technicians, the SmartClass Home iPad app accelerates learning and minimizes decision-making with simple menus. The device interface brings the SmartClass Home alive on the iPad giving users a larger viewing display. The SmartClass Home iPad app also lets users upload data through the job manager to simplify record-keeping and data analysis.

Analyze and repair remote faults faster

The SmartClass Home iPad app lets users control the SmartClass from as far away as 300 feet through the device interface app. Technicians can now connect the SmartClass Home to one location in the home network, move about, make changes, and see the related impact at the test location immediately. This capability is perfect for discovering in-house ingress or faulty connections. This flexible iPad measurement tool saves time and increases mobility for use in tight spaces.

Increase communications range with WiFi

The SmartClass Home lets users set up an ad-hoc connection without the need for another communications hot-spot. WiFi increases the communications range between the iPad and the SmartClass Home for remote test applications, increasing its feasibility over today's Bluetooth technology.

Integrated training and support at your fingertips

The SmartClass Home iPad app gives technicians immediate access to application video clips and other job aids, such as quick start guides and manuals, for fast, effective, context-sensitive learning. A separate accessory guide is available that users can reference when ordering replacement parts.
