1.1 REMOTE COMMANDS FILES

This chapter describes P25 Remote Commands. Refer to the 3900 Series Digital Radio Test Set Remote Programming Manual for detailed information about 3900 system remote commands.

NOTE

Upper range value of 2.71 GHz is only valid for some 3900 models/options. Refer to product specifications for valid upper range.

1.2 UUT MEASUREMENT RETURN VALUES

The information returned in UUT Measurement Meters data strings varies depending on the type of measurement. The following are examples:

```

<statusbyte>,<failbyte>,<precision>,<percentage>,<avg>,<max>,<min>,<units>
<statusbyte>,<failbyte>,<avgcount>,<avg>,<max>,<min>
```

1.2.1 Status Byte (Bitmask)

NOTE

Statusbyte may return more than one condition as a bitmask.

Status Byte returned in the following bit position indicates measurement reading status:

- Bit 0 = Invalid

- Bit 2 = Settling
- Bit 3 = Squelch
- Returns 0 when measurement reading is valid.

1.2.2 Fail Byte (Bitmask)

1.2.3 Precision (Numeric)

Precision value indicates the number of numerals that follow the decimal point in the returned average, maximum and minimum readings.

1.2.4 Percentage (Numeric)

Percentage value indicates the percentage of averaging completed when remote command was issued. For example, if the over n burst field is set to 1000 bursts, and only 500 bursts have been obtained when the query command is issued, the returned percentage value is 50.
