

T-BERD[®]/MTS-6000A MSAM

Serial Number and Option Challenge ID

In order to ship new option upgrades, the JDSU requires the MSAM serial number and option challenge ID. These are used to generate a challenge code specific to the unit being upgraded. That challenge code is then entered by the user to install the upgrade options.

Step 1 – Power on the Base unit and MSAM.

Press the **Results** hard key on the front to enter the main results screen.

Step 2 – Obtain the 9 digit MSAM “BERT” Serial Number

From the MSAM Main Results User Interface, select the **Help** menu selection located across the top of the user interface. Select **About BERT Module**. Record the 9 digit serial number called “**BERT Serial Number**” from the dialog box. Record the 12 digit option challenge ID.
