

VIAVI

Nano and Micro iOTDR Cards

Medium and Long Range Integrated OTDR Fiber Testing Solutions

Gain a competitive advantage with the compact, easy to integrate VIAVI iOTDR™ cards and software. VIAVI iOTDR cards provide NEMS with the capability to help customers accurately locate fiber faults that degrade network traffic. Ensure high availability network services by identifying physical faults causing latency, jitter service quality issues and network outages. Protect data by detecting fiber security intrusion attacks.

VIAVI has specialized in OTDR design and production for over 30 years. VIAVI OTDRs offer unparalleled accuracy, ease of use and reliability that has been proven in rugged, portable instruments, rack mounted remote fiber test equipment and network elements. Select from our range of OTDR wavelengths, dynamic ranges and performance qualities to offer your customer the optimal solution for their in-service test applications.

Delivery of accurate, economical, low power, and easy to use OTDR technology requires years of experience, including an extensive software expertise in OTDR algorithms and user interface simplification to formulate an iOTDR card that is easy to implement for the non-OTDR expert.

- Accelerate your iOTDR integration design process by leveraging VIAVI professional services expertise to assist while you integrate and test the Nano or Micro iOTDR cards within a larger system.
- Provide an exceptionally accurate, reliable, low power, low cost, integrated OTDR. Offer in-service test and monitoring routines to characterize fiber, identify faults, detect intrusion attacks and track fiber degradation for preventative maintenance.

Nano iOTDR card

Micro iOTDR card

Features

- Medium or long distance OTDRs
- Short dead zone
- In-service fiber testing
- Controlled via Ethernet interface
- Large software library
- High distance accuracy
- Support from VIAVI OTDR experts for your development team
- For use in PON, XGS-PON, 5G, DWDM, CWDM and dark fiber testing

Applications

- Fiber characterization
- Fiber monitoring
- Tapping security intrusion detection
- Fault demarcation
- Raman amplified link test

Specifications Nano iOTDR card for Medium Range integrated OTDR – (typical at 25°C)

| General | |
|--|---|
| Dimensions | 98.5 x 67.5 x 16.5 mm |
| Operating case temperature | -5 to 75°C |
| Storage temperature | -40 to 85°C |
| Humidity | 5 to 85% without condensing |
| EMC | EN61326-1, EN6100-3-2 |
| Interfaces | Ethernet 10/100 |
| Power consumption | 5.1 W (Typical at 25°C) 10mW in standby mode |
| OTDR | |
| Laser Safety | Class 1 |
| Number of data points | Up to 512,000 |
| Sampling resolution | From 4 cm |
| Distance range | Up to 160 Km |
| Distance accuracy | +/-1m +/- Sampling resolution +/- distance * 10 ⁻⁵ |
| OTDR Range Details | Medium Range |
| Wavelength ¹ (nm) | 1610 nm |
| Wavelength accuracy ¹ (nm) | +/-5 |
| Dynamic range ² (dB) | 32 |
| Pulse width | 10 ns to 10 µs |
| Event dead zone ³ (m) | 1.5 |
| Attenuation dead zone ⁴ (m) | 5 |

¹Laser at 25°C and measured at 10 µs.

²The one way difference between the extrapolated backscattering level at the start of the fiber and the RMS noise level, after 3 minutes averaging and using the largest pulse width.

³Measured at ±1.5 dB down from the peak of an unsaturated reflective event using the shortest pulse width.

⁴Measured at ±0.5 dB from the linear regression using a -55dB type reflectance and using the shortest pulse width.

Specifications Micro iOTDR card for Medium or Long Range integrated OTDR – (typical at 25°C)

| General | | |
|--|---|-----------------|
| Dimensions | 91 x 170 x 16.5 mm | |
| Operating temperature | -5 to 65°C or 70°C according to the variant | |
| Storage temperature | -20 to 85°C | |
| Humidity | 85% without condensing | |
| EMC | EN61326-1, EN6100-3-2 | |
| Interfaces | Ethernet 10/100/1000 | |
| Power consumption | 5.1 W (Typical at 25°C) 10mW in standby mode | |
| OTDR | | |
| Laser Safety | Class 1 | |
| Number of data points | Up to 512,000 | |
| Sampling resolution | From 4 cm | |
| Distance range | Up to 260 Km | |
| Distance accuracy | +/-1m +/- Sampling resolution +/- distance * 10 ⁻⁵ | |
| OTDR Range Details | Medium Range | Long Range |
| Wavelength ¹ (nm) | 1625 nm | 1610 or 1626 nm |
| Wavelength accuracy ¹ (nm) | +/-3 | +/-3 |
| Dynamic range ² (dB) | 37 | 40 |
| Pulse width | 5 ns to 20 µs | 5ns to 20 µs |
| Event dead zone ³ (m) | 1 | 0.8 |
| Attenuation dead zone ⁴ (m) | 3.5 | 3 |

¹Laser at 25°C and measured at 10 µs.

²The one way difference between the extrapolated backscattering level at the start of the fiber and the RMS noise level, after 3 minutes averaging and using the largest pulse width.

³Measured at ±1.5 dB down from the peak of an unsaturated reflective event using the shortest pulse width.

⁴Measured at ±0.5 dB from the linear regression using a -55dB type reflectance and using the shortest pulse width.
