## IPSec Testing

### Application Performance Testing Solution

Road warriors, telecommuters and business partners all rely on the secure communications capabilities offered by IPSec. VIAVI Avalanche enables Network Equipment Manufacturers, Service Providers, and Enterprise customers to realistically test their IPSec VPN gateways and cloud-based IPSec deployments.

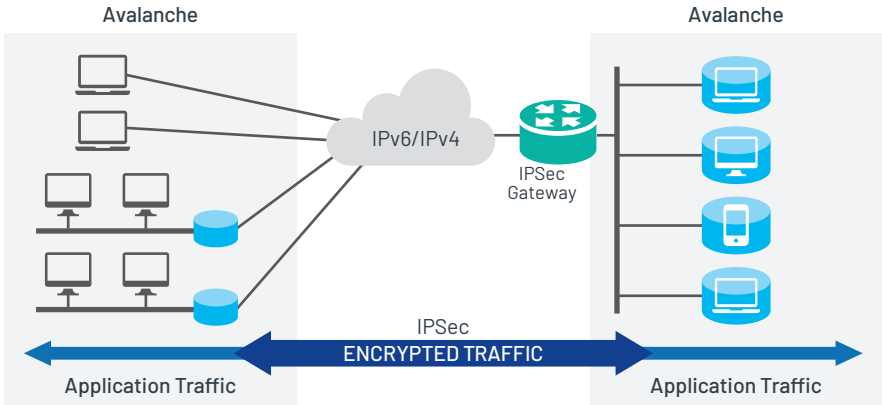

### Benefits

VIAVI Avalanche IPSec feature provides complete performance assessment of IPSec gateways to quickly understand and correct deficiencies before deployment. The use of real application protocols over encrypted tunnels is the best way to truly understand the gateway's effect on user experience.

- **Quicker Time to Test:** Integrated IPSec allows full performance characterization of gateways, leading to faster production roll-outs
- **Avoiding Downtime:** High-performance testing with real traffic identifies proper sizing for your environment while providing comprehensive statistics to locate problem areas
- **Investment Protection:** Support for both IPv4 and IPv6 ensures testing needs can be supported now and for future generation testing
- **Minimizing Cost:** IPSec is a fully integrated Avalanche application that supports many use cases, minimizing the number of test applications to learn
- Comprehensive statistics quickly identify problem areas
- **Tunnel Control:**
  - Persistent and non-persistent tunnels
  - IKE Message Retry timers
    - Max Retry
    - Expire timers
  - Commit Bit support
  - Advanced Re-Keying events capabilities
    - Phase 1 Reconnect
    - Phase 2 Re-Key with old key timer
    - SA lifetimes

### Applications

- Compare application performance with and without IPSec
- Test user data, voice, and video over IPSec tunnels
- Determine maximum tunnel capacity of IPSec gateways
- Measure tunnel set-up and tear-down rates
- Test IPSec tunnel set-up, tear-down and encryption inside the cloud
- Find maximum tunnel throughput
- Test IPSec services over cloud and virtualized environments and devices
- Analyze the effects of aggressive tunnel re-keying
- Measure the user experience through encrypted tunnels
- Support for IKEv1 and IKEv2 for demanding IPSec applications
- Emulate IPSec deployment scenarios for IPv4 and IPv6 networks, including:
  - IPv4 over IPv4
  - IPv4 over IPv6
  - IPv6 over IPv6
- Test site-to-site and remote access tunnels

## Ordering Information

Part Number	Description
CMP-ASW-IPSEC	Avalanche IPSec for C100/C200

## Supported Modules/Platforms

- CF30 Appliances
- CFv
- C200 Appliances
- CF400 Appliances

Available in license bundles for CF30 and CF400 Appliances.

Please contact your VIAVI sales representative for more details, including ordering information for other test devices and CFv.
