

# Network Tools Modeling

Take your existing Viavi solutions to the next level with Network Tools Modeling. Expert consultants will inspect and configure previously-installed network tools for optimal usability. Business technology and priorities are constantly evolving. Adapt your monitoring strategy to changes in your business environment and make sure you're getting the most out of your performance management solutions today.

## Did You Know:

Companies that take advantage of Viavi Solutions® Consulting use twice as many performance management features on average

Correct configuration provides an instant return on investment and high long-term value. Consultants plan and configure everything you need to get the most out your purchase while you save time and money.

## How It Works

This service provides a complete assessment of the network tools to either validate that the solution you currently have in place is configured and designed correctly, or determine which adjustments need to be made. Once the changes are made, documentation is created, and staff is trained on the new approach. The Virtual Service includes 3 half-day remote sessions, while the On-Site Service is up to 3 days. An additional two-hour session is included after 30 days to check-in and answer any configuration questions that may arise.

Relates to the Viavi Observer® Analyzer, Observer GigaStor®, Observer Apex™, Observer Management Server (OMS), Observer Infrastructure (OI), and Observer Matrix

## What You Get

**Here are some of the areas that this service addresses:**
