VIAVI
Observer 3D GigaStor and GigaStor M
Packet Insight For End-User Experience Scoring and Cybersecurity Intelligence
Observer End-User Experience Scoring

The GigaStor and GigaStor M are the foundation on which Apex end-user experience (EUE) scoring is calculated on every network conversation. Once determined, they are instantly available within Apex dashboards individually or rolled up logically as required for real-time global visibility into IT service delivery health.

High-Speed Packet Analysis and Capture Card

GigaStor and GigaStor M uses a custom capture and analysis card for in-depth visibility into network transactions serving as the foundation of the Apex EUE score. Designed to integrate nearly all core packet processing and analytics functionality in hardware, this unique design keeps up with the world’s fastest enterprise networks. With GigaStor, network conversations are also retained via the fastest write-to-storage performance and mining speeds in the industry making every packet retrospectively available for advanced application troubleshooting and security breach remediation.

GigaStor Time Navigation Interface

Rather than using the Apex UI, IT teams can also perform problem isolation with the integrated GigaStor time-based navigation UI. Identify time of problem occurrence, and then navigate down to the nanosecond for quick and accurate root-cause location.

Stop Missing Critical IT Service Anomalies

Together with Apex, Observer® GigaStor™ is instrumental in indentifying IT service delivery issues whether related to network and application problems or security threats. The undisputed leader in packet-based forensic analysis, GigaStor eliminates the time-consuming task of recreating events for troubleshooting or investigation. Using the Apex or GigaStor interface, easily navigate back-in-time and review network activity to the moment in question for detailed packet-level information of the problem, suspicious transaction, or malicious event. Investigations and resolution are always faster with Observer.
GigaStor and GigaStor M Root-Cause Analysis

GigaStor and GigaStor M offer integrated root-cause analysis, minimizing downtime and user impact. Use this as an alternate to Apex workflow troubleshooting. From an enterprise-wide view, you can track numerous operational metrics including bandwidth utilization, network top talkers, application metrics, and even VoIP quality statistics.

Application Analysis

Beyond the Apex EUE scoring, which provides comprehensive service intelligence and troubleshooting, GigaStor also provides detailed intelligence for many well-known and user-defined custom applications. Besides basic response time, using expert analytics offers awareness into actual service error, reason, and response codes held within the payload, invaluable when the issue ultimately resides with non-network or operations teams. Together these capabilities mean fast problem resolution and improved user experience.

Fault Tolerant Designs

GigaStor and GigaStor M rack-mounted models are designed with tuned components and enclosures along with the custom capture cards. The GigaStor appliance family offers transaction visibility at up to 100 Gb network interface speeds and more than a petabyte of data storage. All this while supporting 100% duty cycle, 365X24X7 traffic analysis and for GigaStor models, capture for five years.

Network Security Forensics

GigaStor serves as a network eyewitness, determining whether a problem relates to the network, security, or application. It passively captures and archives all data traversing the network for later analysis and reporting. Beyond rapid application troubleshooting, GigaStor is ideal for augmenting existing security initiatives and can provide crucial operational information for compliance objectives. It can also aid in determining which assets and data were compromised in the event of a security breach, making it ideal for post-event investigation and clean-up of a security breach.

"In the financial industry, losing any data is a big deal. That’s why we use Observer GigaStor to ensure we see everything."

- Chicago Board Options Exchange
Observer 3D Overview

Observer 3D is a comprehensive network performance monitoring (NPM) solution that offers valuable insight and assistance to network, operations, and security teams. GigaStor and GigaStor M are a critical part of Observer 3D, passing network transaction metadata to Apex for calculation of the EUE score.

As the integrated dashboard and reporting resource, Observer Apex serves as point of central global visibility and the launch point for rapid troubleshooting with pre-engineered workflows that help identify root cause using packets, metadata, and enriched and enhanced flow.

Observer 3D helps IT teams in three key ways:

- **Location of Services** – Observer 3D provides observability into every hosting environment, whether private cloud, public cloud, remote users, on premise in branch offices or in the data center. No matter the location, VIAVI has you covered.

- **Data sources** – With Observer 3D, choose between a combination of wire data, enriched and enhanced flow visibility, and metadata generation to enable smooth, timely resolution of performance and threat issues. Automated, role-based workflows make it easy to dive down into the network data for forensic level analysis, regardless of the type of data or source.

- **Scale of deployments** – Start small and grow as your business and monitoring needs and operational demands change. Whether that means flexibility in deployment with our GigaStor Branch or ObserverONE solutions, or flexibility in pricing with our new tiered pricing and subscription models—VIAVI has you covered. Buy what you need when you need it using OpEx or CapEx budget, allowing you to balance your observability and budgetary needs without compromise.

“Observer lets us quickly isolate and resolve routing and retransmission issues with the e-mail server. Without GigaStor, we could have spent hours trying to replicate the slowdown.”

- Central Du Page Hospital

4 VIAVI Observer GigaStor
Observer GigaStor Models

Choose the right GigaStor for your organization's size and needs. An array of appliance options in an assortment of form factors, network speeds, port counts, and capacities are available. GigaStor is also available in two virtual versions, GigaStor Cloud Edition (GCE) and GigaStor Software Edition (GSE) for monitoring visibility in the cloud or on-premises server.
