OneExpert™ For xDSL, G.fast & FTTH

Fast, consistent, and complete!

Consistently achieve high-performance results when deploying ultra-fast residential broadband over xDSL, G.fast, and FTTH.

OneExpert helps field technicians fix problems right the first time, every time. A multitouch, user-friendly interface and OneCheck™ automated tests ease complex tasks with clear pass/fail results. And, its future-proof modules ensure years of use supporting access and home networks.

Key Benefits and Features

- One button OneCheck™ TDR auto identifies fault types and locations right away
- Prove the true customer experience with a standardized TrueSpeed™ test (RFC-6349)
- OneCheck™ automates field tests and simplifies Copper and DSL results to consistently close jobs correctly
- StrataSync™ cloud-enabled asset and test data management provides visibility for test results and completed tasks and keeps track of used instrument inventory
- Modular platform scales for new WiFi, fiber, and xDSL technology including VDSL Profile 35b and G.fast
- OneExpert™ app uses everyday mobile devices for remote control, data enhancements, and connectivity
Open, Modular Design

OneExpert offers the advantages of integrated cloud-based applications, touch screen interfaces, smartphones, and tablets. OneExpert helps technicians perform more efficiently and fix problems faster while ensuring service providers can invest in a long-term, open platform.

xDSL Testing up to G.fast

A sync test is essential in characterizing DSL link quality (bandwidth rates, margins, errors, and likelihood for errors). This test also helps determine whether issues are coming from the equipment (CPE or DSLAM/DPU ports) or from the profile settings. It shows important results on a single DSL summary screen page.

OneExpert supports:
- ADSL/2+ on a single and dual pair
- VDSL single line up to profile 30a
- VDSL single line vectoring, bonded and bonded vectoring up to profile 17a
- VDSL profile 35b
- G.fast
**BPT graph**
Displays the bit-loading per tone
Can help to identify disturbers and interferers present on the line

**Hlog graph**
Loop attenuation component of the channel transfer function (during the modem training phase)
Can detect bridged taps, degraded contacts, and bad joints

**QLN graph**
Noise floor of the DSL line
Shows frequency of potential disturbers/interferers on the DSL line

---

**Single Test-Lead Connection**

When connecting copper test leads, technicians will try to reduce the expense of multiple test cables as well the incidence of errors resulting from using the wrong lead. It is critical to get a proper connection with a good ground, or risk rendering meaningless test results. However, swapping between DSL testing and copper testing during troubleshooting adds time and risks losing test-lead connection quality.

OneExpert lets technicians focus on test leads once, regardless of the number of DSL and copper tests that follow, saving time and, more importantly, avoiding misleading or incorrect results.

<table>

**TrueSpeed (TCP RFC-6349 Speed Testing)**

Broadband IP networks and their throughput speeds are non-deterministic and their behavior is unpredictable. OneExpert TrueSpeed provides a standardized RFC-6349 speed test to measure the throughput at the TCP application layer just as a user would experience it. Other methods, such as FTP upload/download, cannot accurately test ultra-fast broadband rates provided by technologies like Super Vectoring and G.fast..

![OneExpert TrueSpeed throughput test up to 1Gbps](image)

<table>

</tbody>
</table>
IP Data — Web

Internet subscribers demand reliable connectivity and new applications require higher data throughput and network-delay time performance. DSL error protection using interleave delay and error recovery mechanisms, like those for IP video, counteract time-sensitive data throughput using TCP/IP with acknowledgment and retransmission. The OneExpert tester allows technicians to quickly test internet connectivity using the built-in web browser. It tests the data rates provided by VDSL vectoring with FTP/HTTP throughput as key reference tests for TCP/IP applications. Mature tests like IP ping delay are still necessary, especially for real-time applications, such as online gaming.

### IP Data Test

---

IP Video

OneExpert can test multiple standard and high-definition television (SDTV/HDTV) streams regardless of compression format (MPEG-2, MPEG-4p10/H.264, VC-1, and others) and automatically detects the stream type with the Broadcast Auto feature. The OneExpert IP Video application allows for termination of the IP video stream anywhere in the access network using the DSL or Ethernet interface.

Key performance indicators for real-time protocol (RTP) lets the OneExpert DSL precisely measure network QoS and QoE. QoS Expert easily compares critical quality-of-service metrics such as error indicator, continuity error, lost packets, jitter, and latency between two active streams.

### IP Video Test

VoIP

The OneExpert is the ideal test tool to quickly place VoIP calls and verify QoS via mean opinion score (MOS) values. A DSL or Ethernet TE interface tests VoIP anywhere in the access network, replacing either the DSL modem, VoIP phone, or both. The OneExpert also includes an Auto Answer mode in which the unit automatically responds to an incoming call. Viavi provides a wide range voice decoding controls such as G.711, G.722, G.723, G.726, and G.729.

</tbody>
</table>

OneCheck Copper

It is critical to test the copper prior to turning up DSL. What may have worked for POTS or lower-speed DSL may not work for VDSL or as the plant degrades. OneExpert’s OneCheck Copper function simplifies copper testing for field technicians with repeatable pass/fail results.

<table>
<thead>

<tr>
<td>Ground check</td>
<td>Ground connection check for balance</td>
<td>Poor or lack of ground leads to incorrect results, hides possible impairments</td>
</tr>
</tbody>
</table>

OneExpert DSL tests VoIP throughout the IP network registration with gateway test calls on and off the network, and measures near- and far-end IP QoS and MoS.

Inexperienced technicians often will call in a copper expert as soon as they are unable to find a fix, even without being sure the copper is faulty, extending repair times and increasing OpEx. OneCheck Copper lets any tier-1 technician assess copper-pair health automatically by testing the copper circuit as a single-ended line test (SELT) to rule out foreign voltages, opens, shorts, or load coils are on the line. It also tests whether the line is balanced enough for noise rejection so that it does not interfere with the DSL signal.

Copper-loop issues such as foreign voltage, opens shorts, and load coils can impact DSL and triple-play performance.
OneCheck™ TDR

OneCheck TDR allows for both simplicity and accuracy to avoid false TDR readings—not one or the other, as with most TDRs. The automated TDR fault identification mode using patented time varying gain (TVG) and adaptive pulse width technologies precisely locates faults in access copper loops and inside home networks. OneCheck™ TDR is a fast test that provides real-time updates.

<table>
<thead>
<tr>
<th>TDR Test</th>
<th>What It Tests</th>
<th>Why It Is Needed</th>

</tr>
</tbody>
</table>
POTS Dialer

OneExpert reduces the number of test tools a technician needs to carry by providing an integrated butt set. Technicians can use the POTS dialer to verify a line’s continuity to the exchange and that it works without conflicting with the customer’s broadband equipment due to an eventual missing or defective POTS splitter.

<table>
<thead>
<tr>
<th>Copper Test</th>

</tr>
</tbody>
</table>

OneExpert UltraFED

The UltraFED connects the far end of the pair under test while the OneExpert controls it remotely. One technician with one piece of equipment can now perform two-ended pair testing. This makes testing easier and faster as it eliminates driving to the other end of the cable in order to change line conditions.

<table>
<thead>
<tr>

Wiring Tools

Where available, Ethernet cabling is typically preferred for home networks because it delivers optimal data rates and quality of service. OneExpert wiring tools allow for Ethernet CAT5/6/7 or phone wiring CAT3 testing. Technicians can quickly set up a home network using the Wire Mapping Smart Remote and resistive IDs as remote probes. Further, OneExpert supports Hub Flash, port discovery and a ping tool against multiple targets including gateway, DNS and target host/IP addresses.

</tbody>
</table>

### WiFi (Internal)

The use of wireless devices and networks is becoming a common part of every household. With the OneExpert WiFi Scan, technicians are equipped with wireless 802.11b/g/n (2.4 GHz) testing capability to show the signal strength, secure set identification (SSID), configured channel, security, MAC address, and 802.11 protocol at the test location of each wireless 802.11b/g/n network in the area. It also indicates whether a network is secure or vulnerable to security threats.

### WiFi Advisor

With support for the WiFi Advisor accessory on the OneExpert, technicians can evaluate wireless network performance seamlessly for both 2.4 and 5 GHz networks. With support for 802.11 standards a/b/g/n and ac, the ONX and WiFi Advisor combination make WiFi problem solving easier.

Using a single WFED-300AC device, users can quickly visualize, optimize, and troubleshoot WiFi networks with BSSID, Channel, and Spectral views. BSSID view provides quick visibility into active wireless networks and identifies the least-crowded channel to use for an access point. Channel view finds the best channels for an access point by showing utilization, noise, co-channel interferers, adjacent channel interferers, and an overall channel score for each channel. Spectral view shows damaging RF interference with a real-time spectral analyzer configurable by 802.11 band, channel, and channel width.

<table>

**Fiber**

Broadband DSL networks and broadband triple-play services often rely on fiber networks. Examples are fiber-to-the-cabinet (FTTC) or fiber- to-the-distribution-point (FTTdp) that bring the DSLAM closer to the customer for greater VDSL bandwidth. The DSLAM is served with fiber back to the exchange to carry broadband signals. Another example is business customers connected to their service providers via ADSL2+/VDSL and via fiber. This drives the need for field technicians who work in these environments to have both DSL and fiber test capabilities.

For point-to-point fiber installations such as FTTC or business connections, field technicians can use the OneExpert together with the Viavi Solutions MP-60 or MP-80 USB optical power meter (OPM) to ensure that fiber cable attenuation meets system requirement performance and is ready to survive network aging and environmental impacts.

**Coax**

Problematic coax cable accounts for most repeat calls as well as video, voice, data, and multiroom DVR installation problems. Most home coax has never even been tested at the frequency ranges that support these services so problems become more apparent after service installation.

The powerful OneExpert in conjunction with the optional Viavi SmartID coax probes can verify in-home coax (quality and topology) and service distribution to quickly display and certify subscriber
In the HPNA test, OneExpert connects to the HPNA network via CPE and communicates with the HPNA network host to initiate the test. Each communication path between all HPNA network nodes will be tested, letting users segment problem node paths, node-to-node communication issues, and verify that the whole network is functioning correctly. OneExpert can verify that HPNA networks are operating within expected service quality metrics and users can set up pass/fail limits to help simplify testing.

Mobile App

Testing with the OneExpert mobile iOS app is quicker and more efficient because technicians can leave the test set plugged in at one location and run tests remotely using the mobile app. Manage job files and export completed jobs to a server.

Providers need back-office integration to expand the benefits of collecting daily field test results. The mobile app leverages smartphones or tablets to link internal databases to instrument test results.

HPNA

The HPNA technology standard developed by the Home Phoneline Network Alliance (HomePNA™) builds on Ethernet to connect and integrate all the home network components over an unpredictable wiring topology. The HPNA communication is used to pass information around a home to other HPNA-connected devices.
StrataSync

Field operation groups face a challenge keeping track of their test equipment inventory: types of instruments, firmware versions, options, and automated test configurations that match standardized methods and procedures. The challenge increases every time a change must be deployed. Without a means to collect and analyze test data, valuable information about network health is missed.

StrataSync is a hosted, cloud-based solution that manages assets, configurations, and test data for Viavi instruments to ensure they are all equipped with the latest software and installed options. It manages inventory, test results, and performance data from anywhere with browser-based ease improving both technician and instrument efficiency. StrataSync manages and tracks test instruments and collects data from the entire network that can be leveraged for results analysis, and informs and trains the workforce.

<table>

ITU-T G.992.5 Annex A, M (ADSL2+)
ITU-T G.992.5 Annex A, B, J, M (ADSL2+) for module ONX-BDCM-DSL-ANXAB
ITU-T-G.998.1 ATM bonding for module ONX-BDCM-DSL-BONDED and ONX-BDCM-GFAST
ITU-T-G.998.2 PTM bonding for module ONX-BDCM-DSL-BONDED and ONX-BDCM-GFAST
ANSI T1.413-1998, Issue 2
ITU-T G.992.5 INP Amendment 3

General Settings and Features

Auto sync

DSL technology modes G.fast, ADSL, VDSL, auto
PTM mode for ADSL2, ADSL2+, VDSL and G.fast
ATM mode for ADSL, ADSL2, ADSL2+, VDSL2
Auto, ATM, PTM modes configurable

Vectoring for VDSL2
Bonded vectoring support for VDSL2 for module ONX-BDCM-DSL-BONDED and ONX-BDCM-GFAST
Vectoring, vector-friendly, vectoring off modes configurable

DSL RTX (G.INP) configurable for upstream/downstream
PhyR configurable for upstream/downstream
Seamless rate adaption (SRA) on/off
Bitswapping on/off
Configurable V.43 carrier set
24 k interleaving depth on/off

Modem Status and General Information

VDSL Aggregate Attenuation
Modem state — synchronization status
Training time
Synchronization time
ADSL mode, VDSL profile
Transport ATM/PTM/auto
Single-pair or bonding status
Vectoring status information
Estimated loop length
Download rate

Modem Summary Results

Aggregated Data Rate for ONX-BDCM-GFAST
Actual rate per pair
Maximum attainable bit rate per pair
Group actual rate for DSL bonding for module ONX-BDCM-DSL-BONDED and ONX-BDCM-GFAST
Group maximum attainable bit rate for DSL bonding for module ONX-BDCM-DSL-BONDED and ONX-BDCM-GFAST
Line capacity per pair
SNR margin
CRC errors and FEC errors
RTX-UC
LATN (line attenuation)
SATN (signal attenuation)

Graphical Results

Signal-to-noise ratio per tone (SNR)
Bits per tone (BPT)
Quiet-line noise per tone (QLN)
Hlog
Two traces comparable

DSL Errors

Forward error correction (FEC)
Forward error correction errors per minute (FEC/min)
Cyclic redundancy check errors per minute (CRC)

Cyclic redundancy check (CRC/min)
Errored seconds (ES)
Severely errored seconds (SES)
Unavailable seconds (UAS)
Loss-of-frame alarm seconds (LOF)
Loss-of-signal alarm seconds (LOS)
Loss-of-margin alarm seconds (LOM)

DSL RTX (G.INP)
Retransmitted DTUs (RTX-TX)
Corrected DTUs (RTX-C)
Uncorrected DTUs (RTX-UC)

DSL Signal
Sync count
Time in synchronization state (uptime)

10/100/1000 Ethernet TE
Test Interface
10/100/1000 Ethernet, RJ45
2 ports

Test Results
Link status, speed, duplex

Network
Test Interface
ADSL2+/VDSL2/G.fast modem
Ethernet 10/100/1000 (ports 1 and 2; non-blocking switching between ports)

Network Types
DSL/G.fast terminate
DSL/G.fast Trough-router
DSL/G.fast through-bridge
Ethernet terminate

Data Mode
IPoE, PPPoE, multi-VLAN, data off

IP Mode
IPv4, IPv6, IPv4/IPv6 dual stack
IPoA, PPPoA for xDSL and G.fast
**MAC Setting**
Factory default, user-defined

**PPP/IP Connectivity**
BRAS: PAP/CHAP, IPCP
RFCs 2516, 1483, 2684

**VLAN Setting**
Tag on/off
VLAN interface count 1 to 6
ID selection 0-4095
Priority selection 0-7

**LAN Server for DSL Through-Router**
NAT disable/enable
IPv4 Server address
Netmask
DHCP Server disable/enable
Forward Multicast disable/enable

**IP Setup and Status**
WAN/LAN status
Gateway/DNS
Static or DHCP
DHCP user class
DHCP vendor class
IP release/renew
DNS support WAN and LAN
IPv6 mode manual, stateless, DHCPv6 stateful
DHCPv6 option IA_PD, IA_NA
IPv6 global address
Local address mode: manual, automatic
Local IPv6 address
Subnet prefix length
IPv6 gateway
DNS server

**Network Results**
Network status, IP address, net mask, gateway, DNS, MAC address
Packet statistics rate, bytes, frames, errors, drops, collisions
Skew and polarity per pair

**IP Data**
Test Interface
ADSL2+/VDSL2, RJ45 and copper test leads
Ethernet 10/100/1000, RJ45

**IP Ping**
IP ping mode: IPv4, IPv6
Echoes sent/received, ping delay (cur/average/max/min)
Lost count/percentage, packet size
Supports IP address or DNS name destination

**TraceRoute**
Destination, Hop count, delay per hop
IPv4/IPv6 Address, DNS Name
Transmit Type UDP or ICMP
DNS Lookup disabled/enabled

**File Transfer Throughput Test — Speedtest**
Transfer rate, bytes transferred, transfer status
Transfer protocols FTP, HTTP, HTTPS
Transfer direction download, upload

**HTTP authentication type** none, basic, digist
Concurrent download disabled, 1, 2, 3
Auto repeat disabled, enabled

**Web Browser**
Web connectivity through browser

**TrueSpeed Option**
Test Interface
10/100/1000 Ethernet, RJ45
ADSL2+/VDSL2, RJ and copper test leads
Settings
Primary server
Fallback server
Profile with committed information rate (CIR) for upload and download

**Measured and Calculated Results**
Actual rate download/upload
Ideal rate download/upload
TCP efficiency
Round trip time (RTT)
Maximum segment size (MSS)

**Standards**
Viavi TrueSpeed VNF
RFC-6349

**IP Video Option**
Test Interface
xDSL, RJ45 and copper test leads
Ethernet 10/100/1000, RJ45

**Modes**
Terminate
Set-Top Box Emulation
IGMPv2 and v3 emulation client
RTSP emulation client

**Service Selection**
Broadcast auto
Broadcast MPEG2-TS/UDP
Broadcast MPEG2-TS/RTP/UDP
Broadcast RTP/UDP
Broadcast rolling stream
Broadcast TTS/UDP
Broadcast TTS/RTP/UDP
RTSP MPEG2-TS/(RTP)/UDP
RTSP MPEG2-TS/(RTP)/TCP
RTSP RTP/UDP
RTSP RTP/TCP

**Video Settings**
IPv4 IGMP version 2, 3
RTSP port
RTSP interoperability normal, Oracle, Siemens
IPv6 MLD version 2, 3

**Video Source Address Selection**
IP address and port number
IP address, port number, and VoD URL extension
RTSP port select
RTSP vendor select

**Video Analysis Per Video Stream**
Simultaneous stream support

6 terminate

Number of active streams

Combined rate, current/max

**QoS**

- Error indicator current/score
- IGMP latency current/score
- RTSP latency current/max/score
- PCR jitter current/max/score/history
- RTP packet jitter current/max/score/history
- RTP lost current/max/score/history
- Continuity error lost current/max/score/history
- Overall current/max/score/history

**Packet Loss Statistics**

- RTP loss distance errors current/max/total
- RTP loss period errors current/max/total
- Minimum RTP loss distance
- Maximum RTP loss period
- RTP packets lost count
- RTP OOS count
- RTP errors count
- Continuity errors count
- Ethernet RX errors, RX drops count

**Video Stream Data Results**

- Total current/min/max/average
- IP current/min/max/average
- Video current/min/max/average
- Audio current/min/max/average
- Data current/min/max/average
- Unknown current/min/max/average

**Transport Stream Statistics**

- Error indicator count
- Continuity errors count
- Sync errors count
- PAT errors count
- PMT errors count
- PID timeouts count
- Service name
- Program name

**QoS Expert**

Compare two streams for error indicator, lost packets, jitter, latency

**PID Analysis (each stream)**

- PID number
- PID type (video, audio, data, unknown)
- PID description

**Layer Correlation**

Combined result view for Ethernet RX errors, RX dropped, video continuity error, video RTP lost, video loss distance total, video loss period total

**Standards**

- RFC 2236, IGMP
- RFC 2326, RTSP
- ISO (IEC 13818), video transport stream and analysis
- ETSI TR 10-290 V2.1, video measurements
- TFC 1483, RFC-2684, ATM AAL5

---

**VoIP Software Option**

**Test Interface**

- xDSL, RJ45 and copper test leads
- Ethernet 10/100/1000, RJ45

**Supported Signaling Protocols**

- SIP, RFS 3621

**Supported Codec Configurations**

- ITU-T G.711 u-law/A-law (PCM/64 kbps)
- ITU-T G.722 64K
- ITU-T G.7231 (ACELP/5.3, 6.3 kbps)
- ITU-T G.726 (ADPCM/32 kbps)
- ITU-T G.729a (GS-ACELP/8 kbps)

**VoIP Settings**

- Auto-answer
- Local alias
- Outbound alias
- Proxy gateway
- Call control port
- 100Rel support
- SIP interoperability
- Audio codec
- Frame interval
- Jitter buffer size
- Mute line
- User-selectable transmit source (live voice conversation, tone transmit, IP voice announcement)
- User-selectable silence suppression, jitter buffer
- RTP Port, IP ToS

**QoS**

- Call Actions
  - Clear, mute
  - DTMF in-band

**Summary Results**

- Network and call status
- State log
- QoS pass/fail
- MOS, audio codec, local loss, local jitter, local delay

**QoS Results**

- Local overall QoS
- Remote overall QoS
- Delay
- Local jitter
- Remote jitter
- Local packet loss
- Remote packet loss

**MOS Software Option Results (requires VoIP software option)**

- Conversational MOS
- Listener MOS

Coaxial Margin™ measurement

Coaxial Cable Testing

Test Interface
Coax using SmartID or SmartID Plus

Test Probes (near end)
SmartID, SmartID Plus

Settings
Supports any cable coax type with configurable velocity of propagation (VOP) and cable compensation

Tests
Locate cable runs with active RFIDs (requires SmartID Plus)
Single-ended coax map (SECM)

Tests Using SmartIDs as Remote Probes
Locate cable runs with SmartIDs
Dual-ended coax map (DECM)
VDSL home-run check tests home coax runs for VDSL service use
Whole-home check tests the entire coax network physical layer prior to HPNA test

Test Results
Noise ingress and frequency sweep test summary with pass/fail results
Detailed overview of coax network
Detailed view of cable lengths, faults, splitters, filters, amplifiers
Graphically depicts frequency sweep data

HPNA Network Test

Test Interface
Ethernet RJ45 interface to CPE

Tests
Quick and chronic test

Settings
Configurable minimum PHY rate 12 – 256
Configurable SNR 0 – 40
Configurable max packet loss 0 – 99 (quick)
0 – 9,999 (chronic)
Payload length size 6 – 1482
Number of packets to send 0 – 5,000 (quick)
0 – 50,000,000 (chronic)

General Connection Status
Station list including indication of the host
Device ID number
Device MAC address
Device HPNA CopperGate® chipset firmware and version identification

HPNA Network Results
Segment specific rate, constellation, and baud
Segment specific packet error rate (PER)
Segment specific SNR
Segment specific receive power
Segment MAC addresses

Fiber Test

Optical Fiber Power Meter
USB optical power meter MP-60, MP-80
Min/max/average optical power level and wavelength dBm, mW
Connector input Universal 2.5 and 1.25 mm connectors
Power source Universal 2.5 and 1.25 mm connectors
Selecte pass/fail threshold
Signal QoS
Reference value

Optical Fiber Scope
USB optical fiber scope P5000i
Results for zone defects Pass/fail
Results for zone scratches Pass/fail
Low mag field-of-view (FOV) Horizontal 740 μm, vertical 550 μm
High mag field-of-view (FOV) Horizontal 370 μm, vertical 275 μm
Particle size detection <1 μm
Power source USB port

Copper Test - DVOM

Test Interface

K-Test

Two-sided fault test
Results include fault resistance 1, fault resistance 2
UFED support
Fault resistance (RF) 0 to 20 MΩ
Loop resistance 0 to 7 kΩ
Resistance to fault (RTF) RTS 100 Ω to 999 Ω 3% of Resistance to strap (RTS)

Mobile Device Application
iOS Support
8.0 to 9.1
StrataSync
Asset management
Data management
General
Power Supply
Battery Li-ion internal rechargeable, 7.4 V nominal voltage, 6600 mAh
Operating time >4 hours for typical use cases
Auto power down (adjustable)
AC line operation via external adapter/car charger
Connector
DSL test module 8-pin modular (RJ45 type)
Ethernet 2 x 8-pin modular (RJ45)
T/A, R/B, T1/A1, R1/B1 and ground/Earth 2 mm recessed banana
POTS 8-pin modular (RJ45) and tip A – ring B
USB 2 x USB 2.0 client ports
Connectivity
USB flash drive
Remote operation
Mobile device application
Bluetooth
Standard Bluetooth 2.1 + EDR, Bluetooth 4.0 ready
WiFi
Standard 802.11 b/g/n (2.4 GHz)
Audio Support
Speaker/microphone
Bluetooth headset
USB headset
Permissible Ambient Temperature
Nominal range of use 0 to 50°C (32 to 122°F)
Storage and transport -10 to 60°C (14 to 140°F)
Humidity
Operating humidity 10 to 90%
Water/Dust Ingress
Complies with IP54 Designed to comply with IP54
Display
127 mm (5 in) diagonal color WVGA (800 x 480 pixels) backlit LCD with projected capacitive multitouch screen
Physical
Ordering Information

The OneExpert can be ordered fully configured for high-end ADSL2+/VDSL2/AnX fast and copper test demands or scaled for specific needs and applications, such as all fiber only without copper.

Included Test Applications
(all mainframes and package orders except noted differently below)

**Copper on mainframe ONX-580**
- TDR
- OneCheck Copper
- DVOM
- Opens
- Longitudinal balance
- Load coil
- POTS TDR

**Wiring Tools**
Wire map on mainframe ONX-580
- Hub flash
- Port discovery
- Ping tool

**IP Data Tests**
Web browser
- IP ping
- FTP/HTTP speed test

**WiFi**
- Scan
- Access point

**Coax — SmartID**
- Locate IDs
- Single-ended coax map
- Dual-ended coax map
- Whole home check

**StrataSync**
- 1-year asset management

**Description** | **Part Number**
--- | ---
**Mainframe**
OneExpert; ONX-580 | ONX-580
OneExpert; ONX-580A | ONX-580A

**Battery**
ONX580-BATTERY-48WH

**AC universal power adapter**
AC-CHARGER

**Module**
- OneExpert Broadcom 63168 (bonded ready) test module
- ONX580-BDCM-DSL-BONDED
- OneExpert Broadcom 63168 (VDSL, ADSL2+ AnX A/B) test module
- ONX-BDCM-DSL-ANXAB
- OneExpert cover module
- ONX-COVER

**Software Options**
- ADSL/VDSL bonding option for module ONX-BDCM-DSL-BONDED
- ONX580-BONDED
- Gfast option for module ONX-BDCM-GFAST
- ONX580-GFAST
- VDSL2 profile 35b option for module ONX-BDCM-GFAST
- ONX580-V35B
- Apple device connectivity
- ONX580-APPLE-001
- Bluetooth
- ONX580-BLUETOOTH
- HPIA
- ONX580-HPIA

**TrueSpeed** | ONX-TRUESPEED
**IP video** | ONX580-IPVIDEO
**VoIP** | ONX-VOIP
**MOS** | ONX-MOS
**Resistive fault locator** | ONX580-RFL
**Transmission impairments and spectral** | ONX580-TIMS

**Description** | **Part Number**
--- | ---
**Cables**
CATS cable, shielded, RJ45 | CB-016994
Lineman dual pair DSL/copper, bed of nails clips | CB-008502
Lineman dual pair DSL/copper, telco clips | CB-008501
Single pair DSL/copper, T/R/GND – A/B/Earth, bed of nails clips | CB-PAIR1-BOND-GND
Single pair DSL/copper, T1/R1 – A1/B1, bed of nails | HSTDVOM-BOND-YW-BL
Pair 1 DSL/copper cable 4 mm safety banana, T/R – A/B | HSTDVOM-4MM-RED-BLK
Pair 2 DSL/copper cable 4 mm safety banana, T1/R1 – A1/B1 | HSTDVOM-4MM-YW-BL
Ground/earth lead — regular telco clip | HSTDVOMC-LP-GREEN
Pair 1 DSL/copper WB2 4 mm safety banana, T/R/GND – A/B/Earth | CB-00686
Pair 2 DSL/copper WB2 4 mm safety banana, T1/R1 – A1/B1 | CB-00688
Telco clip package for 4 mm banana | CB-CLIPS
Spectral monitor cable | CB-SPE-MON
SmartID USB cable 6 ft | SMARTID-USBCABLE-6FT
SmartID USB cable 3 ft | SMARTID-USBCABLE-3FT

**Accessories**
Large carrying case | CC-034601
Small carrying case | CC-CARRYING-CASE-SMALL
Test Module case | CC-MODULE-CASE
Soft glove | AC-GLOVE
Strand hook | HST-000-098-01
Hand strap | AC-HANDSTRAP
Shoulder strap | AC-005101
Car adapter | AC-CAR-CHARGER
USB headset | CUSB-HEADSET
Bluetooth headset | AC-BLUETOOTH-HEADSET
SmartID Plus incl. micro USB cable | SMARTID-PLUS-1PC-TELCO
SmartID Plus 1 unit | SMARTID-PLUS-1PC
SmartID, 6 units | SMARTID-6PC-TELCO-KIT
Wire mapping smart remote; RJ11, RJ45 | AC-WIREMAP-REMOTE
UFEDIIB bonded far end device with standard accessories | UFEDIIB-PKG-1
SDI-100 WAND | SDI-100
MP-60 – USB optical power meter | MP-60A
P5000I – USB fiber scope | FBP-P5000I

**Wifi Advisor**
Wifi Advisor Basic Package | WFD3000AC-3PC
Wifi Advisor Installer Package | WFD3000AC-2PC

**Services and Support Plans**
Bronze Support Plan 5 years | BRONZE-5
Silver Support Plan 3 years | SILVER-3
Silver Support Plan 5 years | SILVER-5

1. Requires SmartID and SmartID Plus to be ordered separately.
2. Includes test applications as specified above. Requires selection of battery, AC universal power adapter, and power cord.
3. Requires VoIP software option.
4. Enables copper RX tones, spectral, WB noise, wideband impulse noise, wideband impulse noise capture.
