VIAVI Solutions

Product Brief

**VIAVI Anti-Theft Solution for Field Instruments**

The ability to remotely enable and disable field test instruments in case an instrument is stolen, lost, or used without proper authorization is critical to protecting your investment and keeping your costs down. This is especially true for rental agencies and contracting companies, where instruments are constantly changing hands.

VIAVI offers a free anti-theft solution that allows instrument owners to enable or disable their instruments via software configuration so instruments can only be used by authorized users.

VIAVI StrataSync™ Core allows customers to enable or disable an “Anti-Theft” mode. Once the Anti-Theft feature is enabled, and the instrument synchronizes with StrataSync, the anti-theft settings are transferred to the instrument and can’t be overwritten without authorization from the StrataSync account owner. Using StrataSync, the account owner can authorize the use of the instrument by configuring:

- Number of days between syncs
- Number of power cycles without StrataSync synchronization
Example use case

- The account owner enables “Anti-Theft” in StrataSync and sets number of days or power cycles for select units or all units within the account.
- The Anti-Theft function is enabled upon next synchronization with StrataSync.
- If the unit not synchronized within configured time or number of power cycles, the instrument will lock.
- The first time the user powers on following the lock being enabled, they will see the screen with the Meter Locked pop-up window.
- The user will press the OK button in the pop-up window.
- The only accessible functions will be the ability to establish a network connection and sync to StrataSync.
- The user can still edit the StrataSync settings to continue to use the meter, unless the StrataSync administrator has set the unit to “Stolen or Lost” status.

The Anti-Theft feature is currently supported on the following instruments:

- CellAdvisor™ Base Station Analyzer
- CellAdvisor RF Analyzer
- CellAdvisor Signal Analyzer
- CellAdvisor Cable and Antenna Analyzer
- ONX-CATV
- ONX-DSL
- DSAM

Protect your investment with VIAVI StrataSync.
