

# End of Service & Support for IRIS-2000 ATE System

VIAVI Solutions, formerly JcAIR and Aeroflex, will discontinue service and support for the IRIS-2000 ATE System on December 31, 2020.

VIAVI Solutions, formerly JcAIR and Aeroflex, will discontinue service and support for the IRIS-2000 ATE System on December 31, 2020.

The IRIS-2000 was developed by JcAIR in 1986 as a general-purpose ATE system to support return-to-service testing of civil air transport avionics equipment becoming the leading 3rd-party test platform for RF systems. As the aviation market has evolved over the past three decades, it has become more and more difficult to successfully support our valued customers who have relied on this product.

Due to these challenges, it has been decided to end all service and support activities for the IRIS-2000, including TPS Software Revision Service, on December 31, 2020. Customers will be able to obtain THOR registration codes from VIAVI as needed for the foreseeable future.

## **VIAVI's Replacement Product**

The Radio Frequency Expansion Module (RFEM) for SPHEREA's ATEC® Series Test Systems is the designated next level replacement. The RFEM ATE:

- Was developed and is manufactured by VIAVI Solutions in partnership with SPHEREA Test Systems
- Is designed to support testing of Honeywell airborne RF components
- Provides a convenient platform that is compatible with new and existing ATEC® Test Systems
- Includes the new VIAVI NextGen test equipment
- Offers a library of TPS solutions that will test navigation, communication, TCAS, transponder, and other RF systems
- The ATEC® Series/RFEM has full OEM support and CMM listing

To learn more about the RFEM ATE visit:
