

StrataSync™ Initial Setup Guide for

DSAM (All Models)

This guide is intended to assist the StrataSync[™] administrator or user in the initial set up and configuration of their StrataSync[™] enabled instruments. This guide is for informational purposes and not intended to replace the on-line help system available from the Global Navigation Menu in StrataSync[™].

Ensure instruments have at least the minimum required Firmware version installed to enable StrataSync[™]:

- a. For DSAM XT units, Software version 4.3 or higher
- b. For DSAM non-XT units, Software version 3.8 or higher

Note: if you have an XT DSAM meter with Software version lower than 4.3 and/or a non-XT DSAM meter with Software Version lower than 3.8, please use the Test Productivity Pack (TPP) to update your meter(s) to Software Version, 4.5.3 or greater for XT units and 3.8.5 or greater for non-XT units.

Step 1. Prepare the DSAM

- 1. Press the DSAM Configure hard key.
- 2. Select the "Access" soft key.
- 3. Use up/down arrow key to highlight "PC connection".
- 4. Press the Enter key

On the PC Connection Menu:

- 1. Use up/down arrow key to highlight "Server Type"
- 2. Press the Enter key
- 3. Use up/down arrow key to change to StrataSync server then press enter
- 4. Select the "OK" soft key to save the information

- 5. Use up/down arrow key to highlight "account ID"
- 6. Type in *your StrataSync Account ID number* then press enter.
- 7. Select the "Ok" soft key to save the information

dy on set
-
-
-

Step 2. Synchronize your meter

Note: Make sure you have the DSAM connected to an Ethernet connection

- 8. Press the Access hard key
- 9. Select the "Files" soft key
- 10. Use up/down arrow to select Ethernet Synchronize

11. Press Enter

12. Wait until unit finishes synchronizing

Step 3. In StrataSync

- 13. Login to StrataSync (make sure you have permission to manage assets)
- 14. Search for the DSAM unit in the holding bin -> search by Serial Number -> enter
