

This document will give the steps on how to do a rebuild on a RTU.

1. Log into the ONMS application.
2. Connect to the RTU that you want to do a rebuild on. To do this select the  icon on the top.
3. Once connected, go over to RTU menu and click Rebuild.
4. Click on the Start button.
5. Wait for the unit to finish the rebuild. Once the unit has performed the rebuild, click the close button.

6. Go to Physical Layer.
7. Select the RTU that you are connected to.
8. Go to the Status Tab of that RTU.
9. Click on the Sequential button of both the "Monitoring OTDR & OSA" and "Maintenance

OTDR".

The RTU should start to monitor again. If it is not monitoring, call next level of support.
