## MAP Optical Switch Solutions (mISW-C1)

## Optical Switch Tray

The mISW-C1 Optical Switch module is the industry standard for manufacturing test automation applications and has the widest array of switch options in the industry. A member of the LightDirect Family of MAP series modules the mISW-C1 is optimized for switch configurations with more than 24 channels.

The 2U MAP-202C chassis is required for channel counts from 24 to 72.

The 4U MAP-204C chassis is required for channel counts from 96 to 176.

## Configuration Process

All mISW switches are configured by a single part number that defines the function and options of the switch.

The structure of the part number mISW-C1ABBCCCDE-MXXX-MYY is as follows:

- A refers to the number of independent mOSW-C1 switches in the module (currently only 1)
- BB refers to the switch type and defines the input type (1C, 2D1, 2E)
- CCC defines the number of outputs (from 024 to 176, increments shown in table)
- D defines the termination type (B for bulkhead, Q for 3m pigtails, R for 10m pigtails).
- $\mathbf{E}$ defines the options ( $0=$ no option, $1=$ Power Trim option2)
- MXXX defines the fiber type, refer to Table 1
- MYY defines the connector type, refer to Table 2

Table 1

| Code | Fibre Type |
| :--- | :--- |
| M100 | $9 \mu \mathrm{~m}$ Single Mode |
| M101 | $50 \mu \mathrm{~m}(\mathrm{OM} 3)$ |
| M102 | $62.5 \mu \mathrm{~m}(\mathrm{OM} 1)$ |
| M105 |  |

Table 2

| Code | Connector Type |
| :--- | :--- |
| MFP | FC/PC |
| MFA | FC/APC |
| MSC | SC/PC |
| MSU | SC/APC |
| MLC | LC/PC |
| MLU | LC/APC |
| Notes |  |

1. D Config part numbers indicate the number of switchable output states. The total number of physical output connectors will be $2 X$ the number of states i.e. 2Dx024 has 48 output connectors
2. Power Trim option is available only for single mode 1 C type switch with <=72 ports
3. $100 \mu \mathrm{~m}$ fiber type is available only for FC bulkhead termination with <=72 ports
